ENGLISH IMPORTANTE INFORMATION ON THE TRIUMPH® LUMBAR DISC

The Triumph® Lumbar Disc (TRIUMPH® and TRIUMPH-R®) is an implant assembly inserted using a transforaminal, posterior, or lateral lumbar approach. The assembly consists of pressurized superior and inferior endplates with keels. The TRIUMPH® Lumbar Disc is deployed in heights from 1 mm to 17 mm. The implant is available in three width options and six length options.

The superior and inferior endplates are made from either cobalt-chrome-molybdenum alloy, as specified in ASTM F603 and ISO 5832-12, or bearing surfaces made from either cobalt-chrome-molybdenum alloy or radiolucent PEEK polymer, as specified in ASTM F1537, ISO 5832-12 and ASTM F2026. The superior and inferior surfaces are plasma sprayed with commercially pure titanium, as specified in ASTM F67 and F1560.

INSTRUCTIONS
The TRIUMPH® Lumbar Disc is indicated for spinal arthroplasty in treating skeletally mature patients with degenerative disc disease, primary or recurrent degeneration, spinal stenosis, or spondylolisthesis in the lumbar/sacral spine (L1-S1). DDD is defined as discogenic back pain, degeneration of the disc complex by patient history and radiographic studies, with or without leg (radicular) pain. Patients may have spondylolisthesis up to Grade 1 at the involved level.

CONTRAINDICATIONS
The TRIUMPH® Lumbar Disc is contraindicated for patients with the following:

- * Prior surgery at the level of the spine at the affected level due to current or past trauma
- * Radiographic confirmation of facet joint disease or degeneration
- * Osteoporosis, osteopenia, Paget's disease, osteomalacia or any other metabolic bone disease
- * Active systemic or local infection
- * Demineralization of the body sufficiently to allow passage of the implant materials
- * Conditions that may place excessive stress on the lumbar spine and implant, such as severe obesity or degenerative disease
- * Patients whose activity, mental capacity, mental illness, alcoholism, drug abuse, occupation, or lifestyle may interfere with their ability to follow postoperative restrictions and who may place undue stresses on the implant during healing and may be at a higher risk of implant failure

WARNINGS
Please note that with this device and with the surgical procedure are not known but may include:

- * Injury to nerves, vessels, and organs
- * Allergic or tissue reaction to implant materials
- * Hematoma and impaired wound healing
- * Migration or loosening of the device
- * Fracture of the device
- * Heterotopic ossification and fusion
- * Venous thrombosis, lung embolism, and cardiac arrest
- * Death

PRECAUTIONS
The implantation of spinal devices should be performed only by experienced spinal surgeons with specific training in the use of this system because it is a technically demanding procedure presenting a risk of serious injury to the patient. Preoperative planning and patient anatomy should be considered when selecting implant size.

MRI SAFETY INFORMATION

The TRIUMPH® Lumbar Disc (TRIUMPH® and TRIUMPH-R®) are MR Conditional. A patient with this device can be safely scanned in an MRI system meeting the following conditions:

* Static magnetic field strength of 1.0 Tesla or less

* Maximum gradient field strength of 3.0 Tesla or less

* Maximum MR system reported, while body-worn implants are safe for use.

Under the scan conditions defined above, the TRIUMPH® Lumbar Disc (TRIUMPH® and TRIUMPH-R®) are expected to produce a maximum temperature rise of less or equal to 3.9°C after 15 minutes of continuous scanning.

The image artifact caused by the device is not expected to extend beyond 35mm from the device when imaged with a gradient echo pulse sequence and a 3.0 Tesla MRI system.

ATTENTION

Under no circumstances should the TRIUMPH® device components be used in combination with components from other suppliers.

Damage to weight bearing structures can give rise to loosening of the device components, dislocation, and migration, and other serious complications; the implant should be checked periodically.

PACKAGING

All instruments and implants should be checked for pre-packed and sterile, using gamma sterilization. The integrity of the sterile packaging should be checked to ensure that sterility of the contents is not compromised. Packaging should be carefully checked for completeness and all components should be carefully checked to ensure that there is no damage prior to use. Damaged packages or products should not be used, and should be returned to Globus Medical. During surgery, after the correct size has been determined, the implant should be checked periodically.

The instrument set provided is pre-powdered and must be sterilized prior to use, as described in the STERILIZATION section below. Following use or exposure to soil, instruments must be cleaned, as described in the CLEANING section below.

HANDLING

All instruments and implants are made from materials that are safe for use.

Caution should be taken when handling the instruments to avoid damage to the device.

After surgery, the instruments should be checked for damage before being returned to the manufacturer.
